Summary

B.Tech Computer Science student specializing in Agentic AI, Machine Learning, and Backend Engineering. Proven track record of designing autonomous AI agents, fine-tuning LLMs, and building robust data curation pipelines. Experienced in designing scalable backend systems, database schemas, and custom workflow automations to improve operational efficiency.

Education

United Institute of Technology, Prayagraj <i>B.Tech in Computer Science and Engineering (7.47 CGPA up to 5th sem)</i>	2023 – 2027
Allahabad Public School, Prayagraj <i>Intermediate (85.8%) & High School (88.3%)</i>	2020 – 2022

Experience

Sanfy Consultancy Services Pvt. Ltd. (Orvanto AI) Certificate <i>Backend Developer Intern</i>	Apr 2026 – Jul 2026
- Designed and optimized high-throughput REST APIs and backend infrastructure using Python, FastAPI, and SQL. - Engineered custom n8n automation workflows and Docker environments to streamline data ingestion and system processes. - Collaborated with the product team to debug complex systems, integrate third-party APIs, and resolve database bottlenecks.	

Technical Projects

A.E.G.I.S — Total Communication Security GitHub Demo	Jan 2026 – Feb 2026
- Architected a sub-second (< 280ms) real-time audio pipeline using FastAPI WebSockets, WebRTC VAD, and AASIST deepfake voice detection. - Integrated Sarvam AI multilingual STT (7+ Indic languages) with weighted hybrid risk scoring and automated Guardian SOS alerts.	
Concept3D — AI Concept-to-3D Visualization GitHub Demo	Feb 2026 – Mar 2026
- Led backend and 3D data pipeline engineering to translate unstructured conceptual data into structured 3D generation inputs. - Streamlined generation workflows by designing an AI-driven semantic preprocessing pipeline (Python, PyTorch, Gen-AI).	
SunMap — Solar Potential & Revenue Simulation GitHub Demo	Oct 2025
- Led predictive analytics and spatial data structuring to construct simulation environments for solar energy assessment. - Trained custom PyTorch models on spatial data to predict solar capacity and generate cost-benefit revenue forecasts.	
KavachG — AI-Based Safety KPI & Monitoring GitHub Demo	Apr 2025 – Jun 2025
- Developed machine learning pipelines and backend service integrations for a smart safety monitoring dashboard. - Deployed real-time computer vision models to automate safety compliance checks (OpenCV, FastAPI).	

Skills

Generative AI & Agentic Systems: Agentic AI, LLM Fine-Tuning, RAG, Data Curation
Machine Learning & CV: Machine Learning, Computer Vision, PyTorch, TensorFlow, Scikit-Learn, EDA
Backend & Data Engineering: FastAPI, SQL (DBMS), ETL, Data Modeling, WebSocket API
Programming Languages: Python, C++, C
Tools & Automation: Docker, Git/GitHub, n8n (Workflow Automation), Figma (UI/UX)

Publications & Certifications

- Physiochemical Pattern Fingerprinting (PPF): Protein Homology Detection (IJDDT, Vol. 16, Issue 4)**
Co-authored a memory-efficient approach to structurally-sensitive homology detection.
- CS50's Introduction to Artificial Intelligence with Python** — Covered search, ML, NLP, and AI in Python.

Achievements

- Prototype Development Sprint Qualifier, Sankalp 2026 – National Summit on Innovation & Skills (MNNIT Prayagraj)** — Pitched and built Concept3D, an AI-driven platform for generating interactive 3D visualizations.
- Second Runner-Up, UHACK 4.0 Hackathon (United Group of Institutions)** — Delivered A.E.G.I.S, an AI-powered scam detection pipeline leveraging audio analytics to protect user assets.
- Second Runner-Up, CodeStorm'25 Hackathon (Shambhunath Group of Institutions)** — Developed SunMap, a data-driven 3D potential analyzer enabling strategic visualization and energy forecasting.
